PRODUCT PROMISE

Scholarium does not reduce a learner to a grade. Teach links learning attempts, proof of mastery, strengths, projects, and context while leaving interpretation and decisions with people.

Empowerment

Difficulties guide support. They never become a label for the learner. Strength observations retain evidence, contradiction, confidence, age, and correction.

Edge-case first

Essential paths are designed for deaf or signed use, non-verbal communication, autism calm, Tourette-safe timing, ADHD sprints, dyslexia, dyspraxia, keyboard, and screen reader access.

Evidence before claim

Every completed capability requires a versioned contract, lifecycle handling, a direct test, and an explicit authority boundary. Real learner data remains blocked before EFVP.

Current operating truth

The product is a validated pre-alpha on synthetic data. G11 integrity evidence is closed. G12 product story and documentation are closing. G13 quality and G14 operations remain required before exposure.

One platform, three working surfaces

The screenshot displays the Scholarium platform interface. On the left is a sidebar with the Scholarium logo and navigation links: Signal, Teach, AlgoQuest, Cours, Projets, Cercles, Studio, Statistiques, and a section for OUTILS (Bibliothèque, Enregistres, Migration, QuaNthoR). Below these is a 'Sign in' button with the text 'Free means discoverable. Paid tools never change teach, ranking, or your right to publish.' and a 'Choose an identity provider' link.

The main content area features a 'Pre-alpha preview' banner at the top. Below it is the 'Today's signal' section, which includes a 'SecuredMe' project card with a 'Publish work' button. A search bar is located below the signal section. The 'Discover' tab is active, showing a list of publications. The first publication is by Dr. Amina Rahman, titled 'Open watershed models for community climate resilience', with a 'Preview Example' button and a 'Verified' status. The second publication is by Nora Vidal, titled 'Celebrating our Grade 11 soil microbiome field team', also with a 'Preview Example' button and 'Verified' status. The third publication is by the Open Hardware Collective, titled 'How our low-cost spectrometer becomes a classroom project', with a 'Preview Example' button and 'Verified' status. Each publication card includes a 'Start project' button and a 'Support' button.

On the right side of the main content area, there are three panels: 'YOUR DISCOVERY' (Open algorithm), 'Topics to follow' (with tags like #OpenScience, #QuantumEducation, #ClimateSystems, #CommunityCode), and 'PREVIEW PROJECT' (Libre Lab Instruments).

Scholarium

Signal, projects, circles, recognitions, portfolio evidence, and multidimensional statistics.

Teach

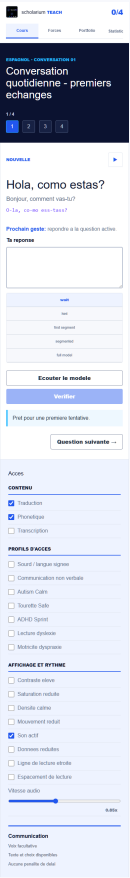

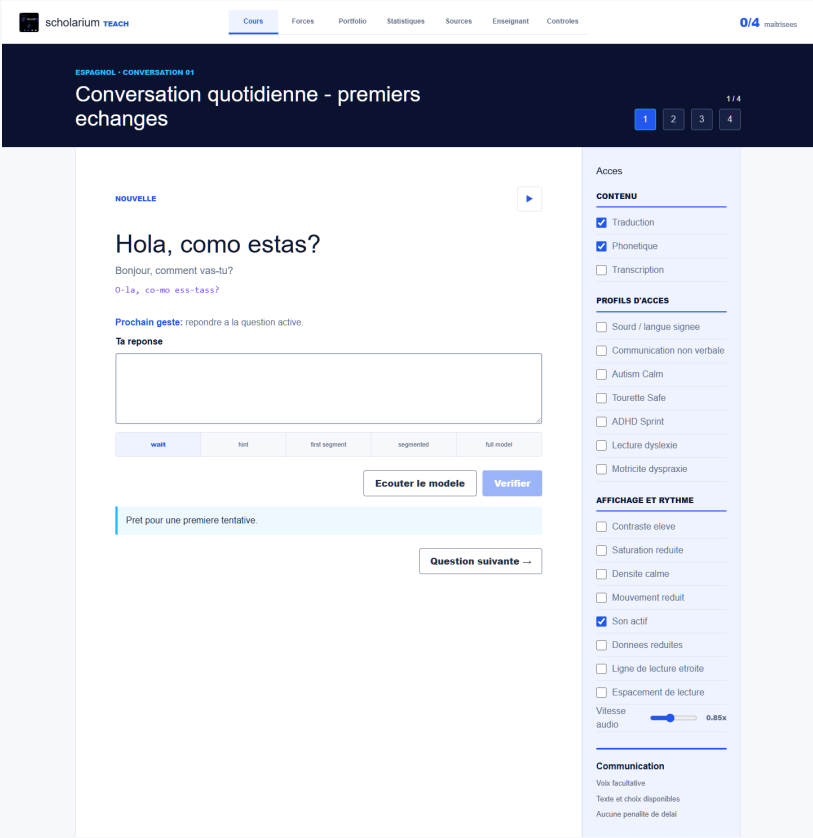

Courses, recall, help levels, mastery evidence, sources, consent, and role-specific projections.

AlgoQuest

Durable, versioned, idempotent gateway between educational actions and bounded assistants.

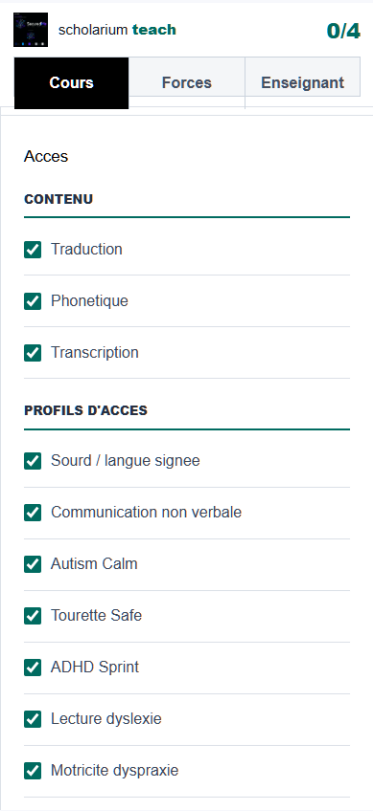

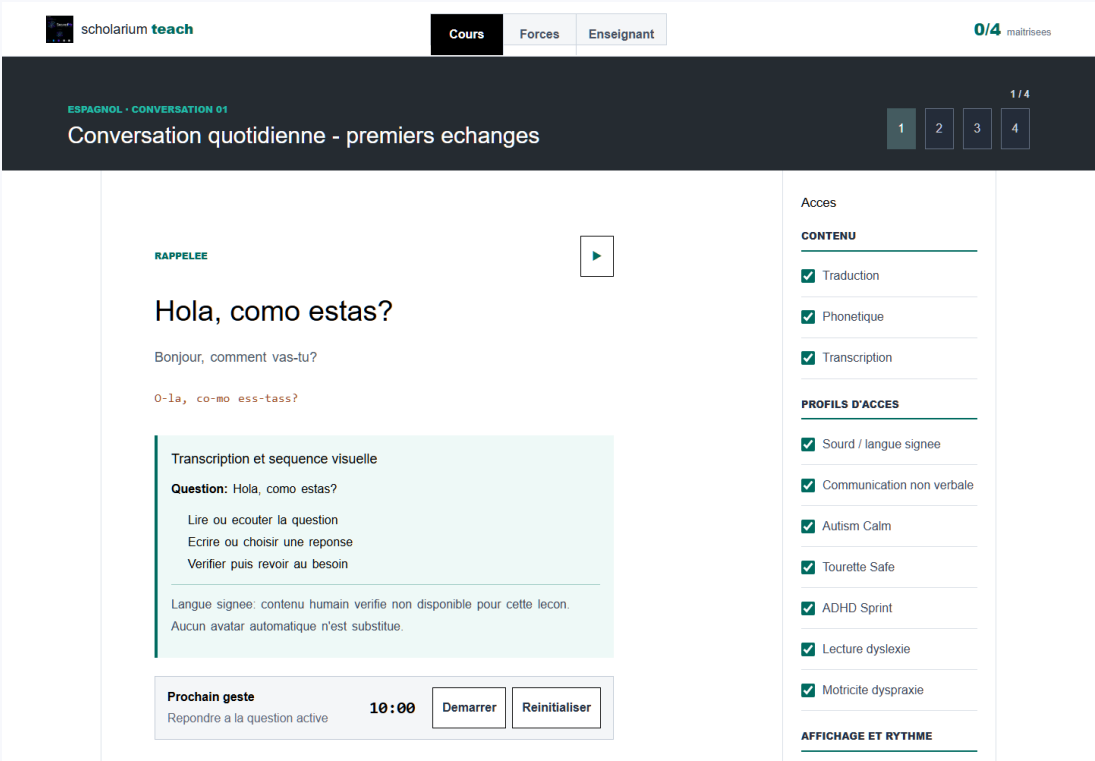

The application is the first screen

LEARNER WORKSPACE

The same Teach domain adapts to desktop and mobile. Stable navigation exposes course, portfolio, statistics, sources, and administration without splitting identity or duplicating the learner record.

Accessibility defines the baseline

Lecture multidimensionnelle

Synthetic visual QA projection.

Growth stories

Result, proof, context, and learner reflection stay connected.

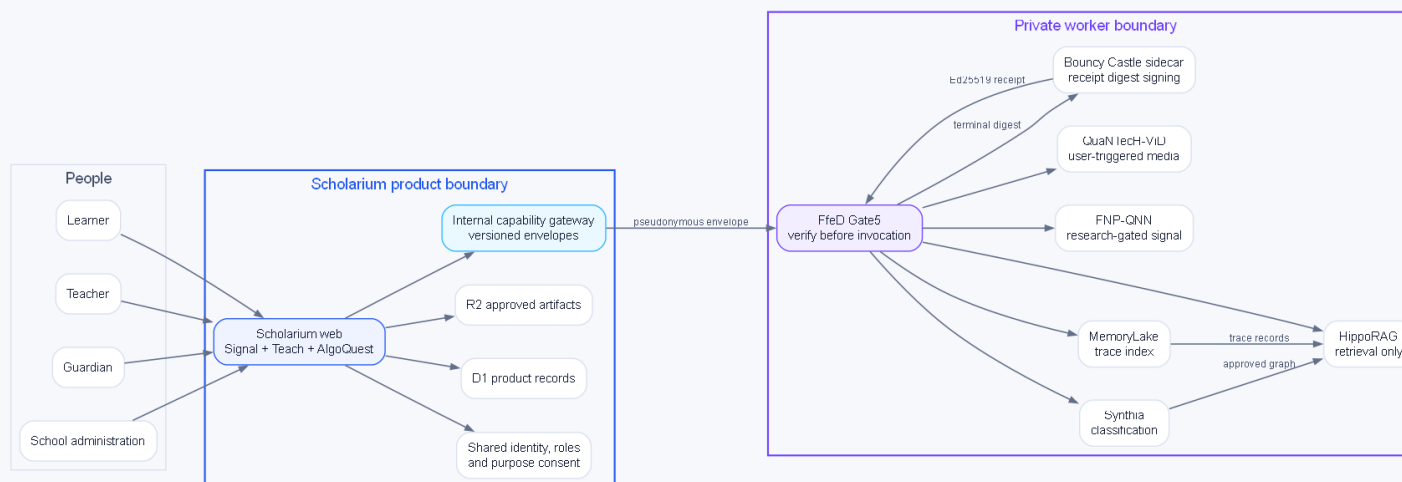

Project threads

Milestones, versions, files, sources, and contributions show process.

Honest difficulty

Original expression is preserved; constructive reformulation remains optional.

Teach is a domain, not a second platform

Web boundary

Cloudflare hosts the product surface. It does not import pluginpack, FfeD, HippoRAG, or research runtimes.

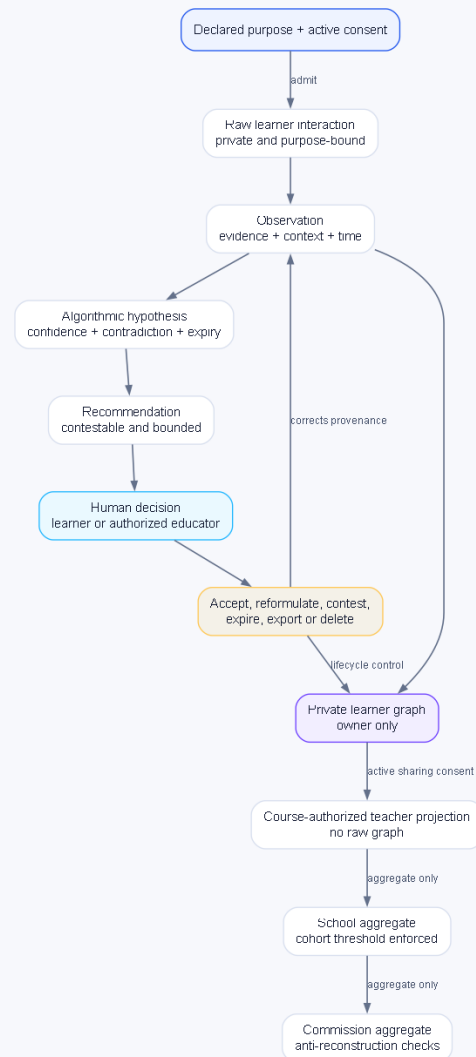

Private gateway

Gate5 applies versioned contracts, pseudonymization, integrity checks, expiry, and receipts.

Human authority

Assistants structure and retrieve. Learners and authorized people decide.

The data lifecycle stays inspectable

Observe, do not label

Raw attempts remain separate from observations, inferences, recommendations, and human decisions.

Consent travels with purpose

Learning, personalization, profiling, sharing, and media are distinct purposes with revocation and retention rules.

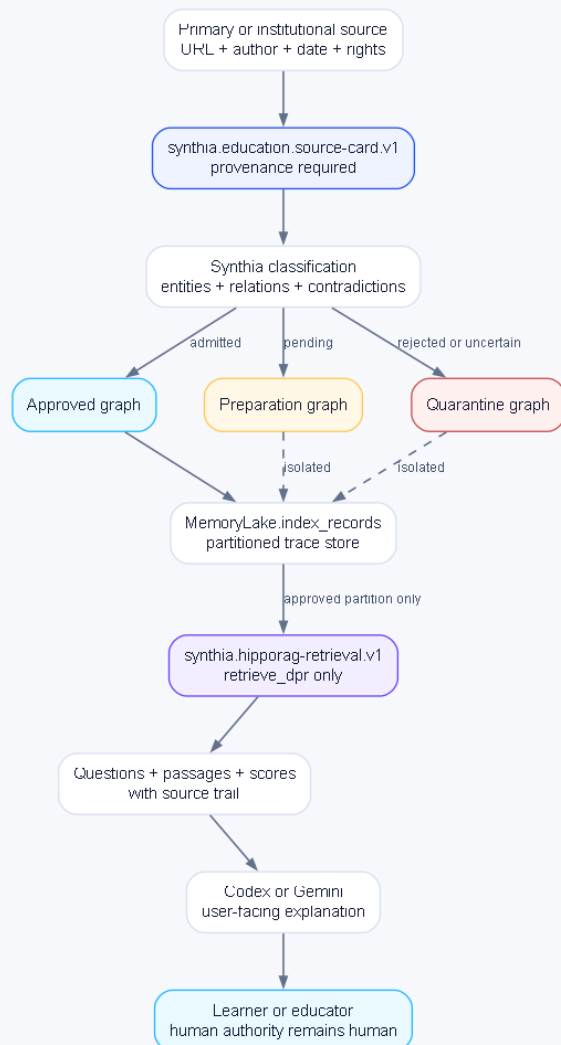

Learner correction remains active

Strength proposals may be accepted, reformulated, contested, expired, or deleted by the learner.

Current boundary

No real learner record enters this lifecycle before the EFVP and legal review close.

Retrieval remains sourced and non-authoritative

Synthia classifies

Source cards retain author, URL, licence, date, citation, rights, concepts, relations, and contradictions.

MemoryLake locates

The central gateway records trace links and graph locations. Plugins do not keep independent MEMOIRE.md files.

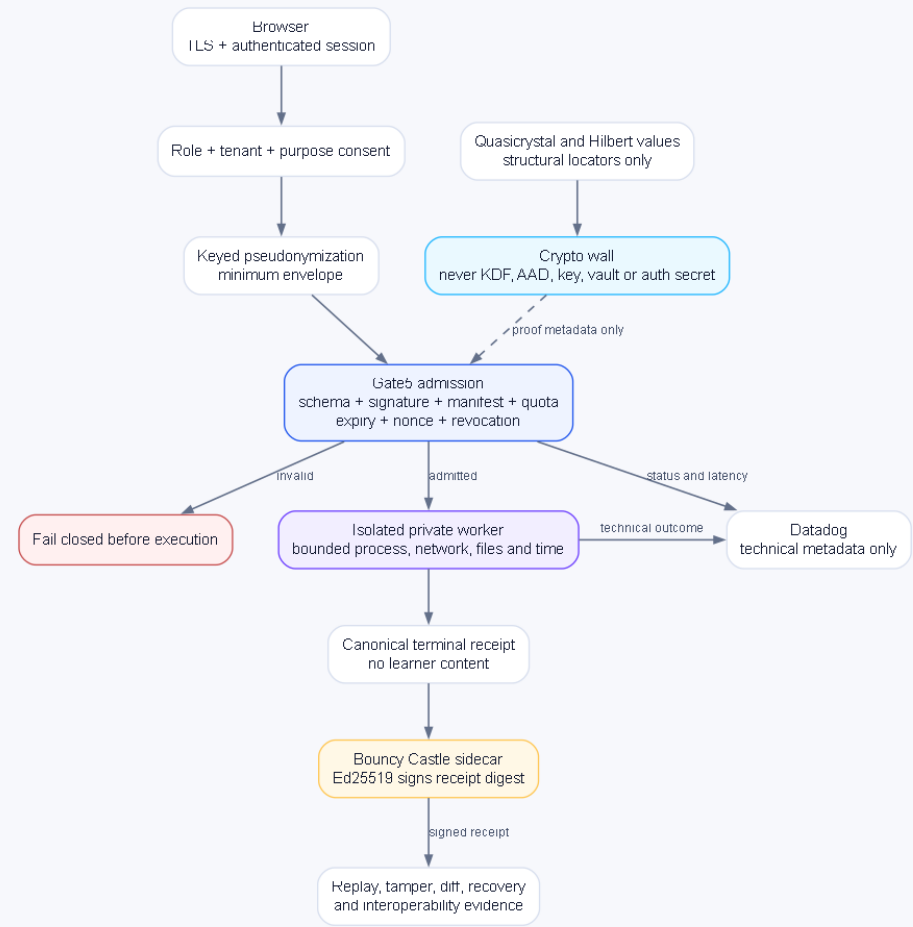

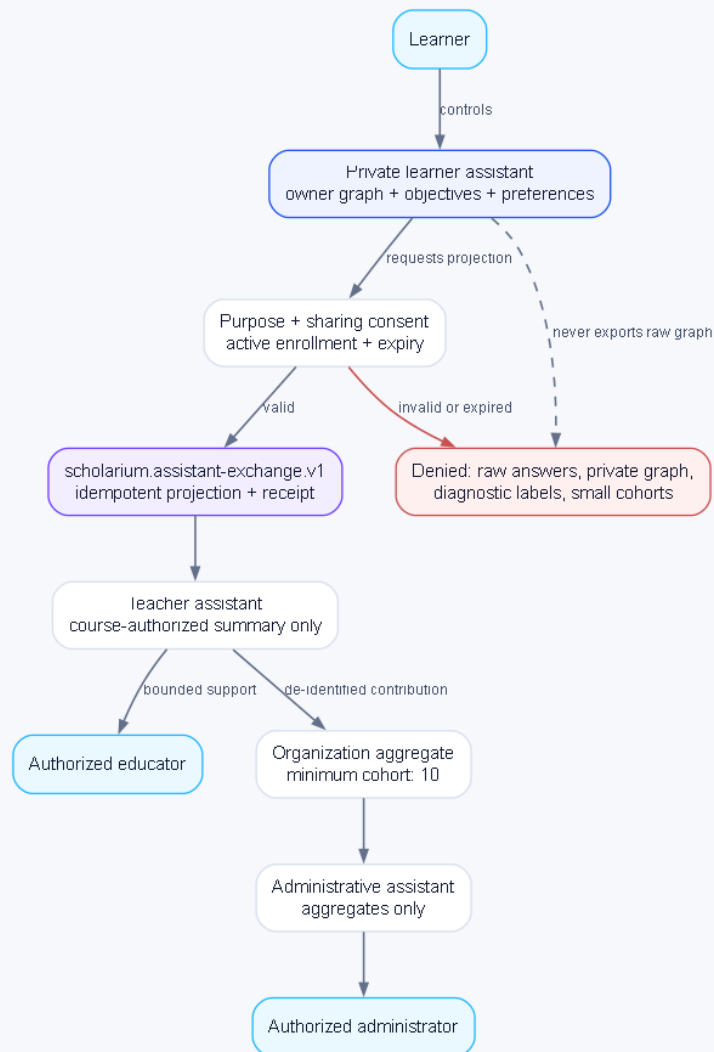

HippoRAG retrieves

Approved, preparation, and quarantine graphs remain separate. Retrieval does not grant taxonomic authority.

Codex or Gemini generates

Generation stays in an authorized school route and must preserve citations, uncertainty, and human review.

Authority and security boundaries are explicit

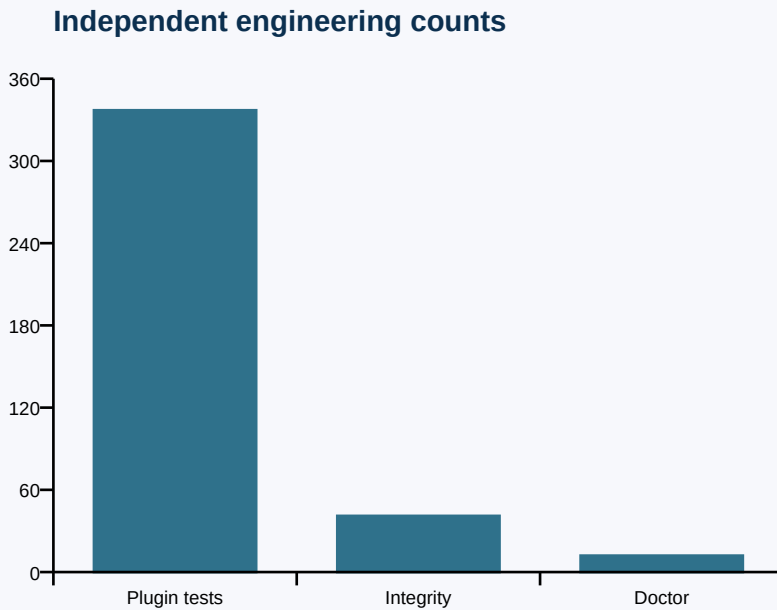

Versioned contracts keep components replaceable

Contract	Purpose	Boundary
learning-attempt.v1	Question, answer, help, delay	No mastery by repetition alone
mastery-evidence.v1	Minimal proof and transfer	Evidence remains inspectable
strength-observation.v1	Contextual strength proposal	Contradiction, expiry, correction
growth-story.v1	Multidimensional success	Proof and reflection remain linked
Gate5 capability	Private engine invocation	Allowlist, integrity, expiry, receipt

Compatibility rule

Cloudflare, FfeD, Python workers, Synthia, memory, retrieval, FNP-QNN, and media communicate through versioned adapters. Scholarium never imports research runtimes directly.

Verified evidence stays scoped

Surface	Result	Scope
Pluginpack tests	337 passed	Local package
Manifest integrity	41 / 41	Allowlisted manifests
Plugin doctor	12 / 12	Health checks
FNP-QNN bridge	29 passed, 1 skipped	Adapter integration
Browser console	0 errors	Validated local paths
Local D1	34 migrations / 75 tables	Development database

Interpretation rule

Counts are not combined into a readiness percentage. A passing engineering result cannot override an open EFVP, privacy, authority, accessibility, failure, or deployment gate.

Open risks and next gates

Privacy approval

Risk
EFVP and legal review are not closed.

Current control
Synthetic data only

Quality breadth

Risk
G13 full suites remain open.

Current control
No completion claim

Environment debt

Risk
Central Pillow is inconsistent while
media is active.

Current control
Isolated QA runtime

Deployment

Risk
cPanel and Cloudflare paths are not
prepared.

Current control
Localhost only

DECISION

Proceed to G13. Keep real learner data blocked.

The product story, visual system, contracts, diagrams, role guidance, and evidence review now describe one coherent Teach domain. The next claim must come from direct quality and security proof.
